Description

Wessels type WB-series WesPac brazed plate heat exchangers are ASME certified and designed to efficiently transfer heat from one fluid to another. The fluids are separated by corrosion resistant heat transfer plates that are bound togther using brazing material.

Construction

Plate Material: 316SS Connection Material: 316SS Braze Material: Copper

Performance Limitations

Maximum Design Temperature: 325 Maximum Design Pressure: 435 PSIG

*For alternative materials and pressures consult factory

Furnish and install, as shown on plans, a WB brazed plate heat exchanger. Each heat exchanger
must be designed to have the capacity and pressure/temperature rating as detailed in the schedule. The heat
exchanger shall utilize 316 stainless steel and copper brazed to separate the two. Each plate shall be Wessel
model number or approved equal.

Notes

- Heat exchanger supports provided separately.
- All dimensions + / 0.125".
- WB15D is double wall construction.
